

HOMEheartbeat™

The World's First Home Awareness System

Home Heartbeat's wireless sensors monitor critical areas in your home and alert you, before a minor malfunction becomes a major problem.

HOW HOME HEARTBEAT WORKS

Home Heartbeat is a network of wireless sensors that monitor and report the status of up to 30 sensors in the home. The sensors relay status information to the Home Heartbeat Base Station, which then relays the information to you. You can choose how you want to receive information from the Base Station, either as Alerts on a cell phone or as Real-time Status, via a broadband connection.

It's easy to get started:

STEP 1

Purchase the Home Heartbeat starter kit. The starter kit includes:

- Base Station- the central data collection device
- HomeKey- used for programming sensors, changing settings and quickly checking the status of any sensor while at home
- Open/Closed Sensor- monitors the status of a door, window, or drawer

STEP 2

Customize the Home Heartbeat system to your home. Select up to 30 sensors per Base Station to monitor a wide array of situations. Choose from water, open/closed, reminder, attention, power, garage, and motion sensors. See the Sensor chart for a complete listing.

STEP 3

Go to www.homeheartbeat.com or call 1-800-813-2199 to set-up how you want to receive information from Home Heartbeat. Choose from either cell phone or email Alerts. Then use the HomeKey to program all your sensors. The Real-time Status feature is available with the purchase of the Broadband Gateway Extender component.

A security system guards your home from break-ins; but Home Heartbeat protects your home from breakdowns.

POWER SENSOR

Monitors status of electronic devices.

MOTION SENSOR

Notifies you of movement in designated areas.

ATTENTION SENSOR

A push button that sends a pre-set message to you

WATER SHUT-OFF CONTROLLER

Turns water off at the source.

GARAGE DOOR SENSOR

Reports if gargage door is up or down.

BROADBAND GATEWAY

Check the real-time status of the sensors through a Broadband Gateway.

OPEN/CLOSED SENSOR

Reports the status of doors, windows, cabinets, or drawers

REMINDER SENSOR

Sends reminders about events and tasks.

RANGE EXTENDER

Extends your sensor range for increased coverage.

WATER SENSOR

Alerts you to the presence of water.
